SKILLS

- Python (Programming Language)
- Frontend Development
 - Html/CSS,
 - JavaScript,
 - Bootstrap (CSS Framework)
- Backend Development
 - Django (Python Framework)
- UI/UX
- GIT
- GitHub
- AI & ML

LANGUAGES KNOWN

English, Tamil

CERTIFICATIONS

- Python Fullstack Development

Personal Portfolio Websites |
August 2025 - August 2025

MANOJ RAMESH

RESUME SUMMARY

Enthusiastic and detail-oriented Python Full Stack Developer with hands-on experience in building dynamic web applications using Python, Django, HTML, CSS, JavaScript, and MySQL. Skilled in both front-end and back-end development, creating responsive, user-friendly interfaces and robust backend systems. Passionate about problem-solving, learning new technologies, and developing efficient, scalable solutions.

EDUCATION

Graduation

Course	B.E. (Computers Science Engineering)
College	Fatima Michael college of engineering and technology
Year of Passing	2025
Score	75%

INTERNSHIPS

Wizinoa | June 2024 - August 2024

- Developed cross-platform mobile applications using Dart and the Flutter framework, ensuring compatibility on both Android and iOS.
- Designed responsive User Interfaces (UI) using Dart widgets to create smooth animations and intuitive navigation.
- Integrated RESTful APIs to fetch remote data and managed application state efficiently. Collaborated with the design team to translate Figma prototypes into functional mobile code.

Forage | January 2024 - February 2024

- Completed a practical simulation covering the full technology lifecycle, including Coding, Data Analysis, Development, and Cybersecurity.
- Developed a data unification algorithm and investigated security breaches using log analysis. Designed a dashboard to visualize complex datasets for client reporting.

WebGapp | June 2023 - July 2023

- Designed and developed responsive user interfaces using HTML5 and CSS3, ensuring compatibility across mobile and desktop devices.
- Utilized Bootstrap framework to rapidly prototype layouts and maintain design consistency. Integrated PHP scripts to render dynamic content and handle user form submissions efficiently.

PROJECTS

Technologies: HTML, CSS, JavaScript

- Developed a responsive personal portfolio website to showcase skills, projects, and contact details.
- Used HTML5 for structure, CSS3 (Flexbox & Media Queries) for responsive design, and JavaScript for interactivity and form validation.
- Implemented smooth navigation, mobile-friendly layout, and clean UI design.

Problems Faced & Solutions

- Responsiveness issues: Fixed layout breaking on mobile using media queries and Flexbox.
- Navigation problems: Corrected section IDs and added smooth scrolling.
- Form validation: Prevented empty and invalid inputs using JavaScript validation.

Hospital Management System |
July 2025 - July 2025

Technologies: Python, Tkinter, MySQL

- Developed a desktop-based Hospital Management System to manage patient records, doctors, and appointments efficiently.
- Implemented login and signup authentication, patient CRUD operations, and database connectivity using MySQL.
- Designed user-friendly interfaces using Tkinter and handled backend logic with Python.
-

Problems Faced & Solutions

- Developed a desktop-based Hospital Management System to manage patient records, doctors, and appointments efficiently.
- Implemented login and signup authentication, patient CRUD operations, and database connectivity using MySQL.
- Designed user-friendly interfaces using Tkinter and handled backend logic with Python.
-

Virtual Mouse Using Hand Gestures |
January 2025 - May 20

Technologies: Python, MediaPipe, MySQL

- Developed a virtual mouse system that allows users to control mouse actions using hand gestures captured through a webcam.
- Used MediaPipe for real-time hand landmark detection and OpenCV for video processing.
- Implemented gesture-based actions such as cursor movement, left click, and right click using Python.
-

Problems Faced & Solutions

- Hand detection accuracy: Improved detection by adjusting camera lighting and confidence thresholds.
- Cursor jitter: Reduced unstable cursor movement using smoothing techniques.
- Gesture misdetection: Fine-tuned landmark distance calculations to differentiate gestures correctly.
-

Food Delivery App (UI, UX) |
March 2025 - March 2025

Technologies: Figma (UI/UX), Wireframing, Prototyping

- Designed a user-friendly food delivery mobile app interface focusing on smooth navigation and clean visual hierarchy.
- Created wireframes, high-fidelity UI screens, and interactive prototypes for key flows such as login, restaurant listing, food selection, cart, and checkout.
- Applied UI/UX principles like consistency, accessibility, color contrast, and user-centered design.
-

Problems Faced & Solutions

- User flow confusion: Simplified navigation and reduced steps in ordering flow.
- Visual clutter: Improved spacing, typography, and color consistency.
- Usability issues: Refined layouts based on user perspective and feedback.
-

Job portal (Django) |
Jan 2026 - Feb 2026

Technologies: Python, Django, HTML, CSS, Bootstrap, JavaScript, SQLite/MySQL

- Developed a web-based Online Course Platform using Python and Django framework.
- Implemented user registration and login system for secure authentication.
- Designed responsive user interface using HTML, CSS, and Bootstrap.
- Created features to browse courses, enroll in courses, and view course details.
-

Problems Faced & Solutions

- Resolved user authentication and login issues by correctly configuring Django authentication and URL routing.
- Fixed database migration and model errors using Django migration commands (makemigrations, migrate).
- Solved frontend and backend integration issues by properly connecting Django views, templates, and URLs.
-
